

Raw pipe

Ry : 6.62 μ m/Ra : 1.02 μ m/Rz : 4.70 μ m

Polished pipe

Ry : 0.21 μ m/Ra : 0.02 μ m/Rz : 0.18 μ m

Dispensing Nozzle Options · Build-to-Print

Polished Pipe Interior

Features

Stable dispensing amounts

Resistance met by fluids flowing through the pipe is lessened, improving stability in amount of material dispensed.

Clog Free

Improved flow freedom prevents clogs.

Easy Maintenance

Less surface roughness in comparison to raw pipe improves the ease of dispenser cleaning.

Control of material separation caused by coating decompression

When the flow resistance is improved, less dispensing pressure is necessary, curbing separation of the fluid.
